

Project Design Phase-II
Data Flow Diagram & User Stories

Date	22 June 2026
Project Name	An employee requests installation of licensed software through the Service Catalog
Maximum Marks	4 Marks

Data Flow Diagram (DFD) Refinements:

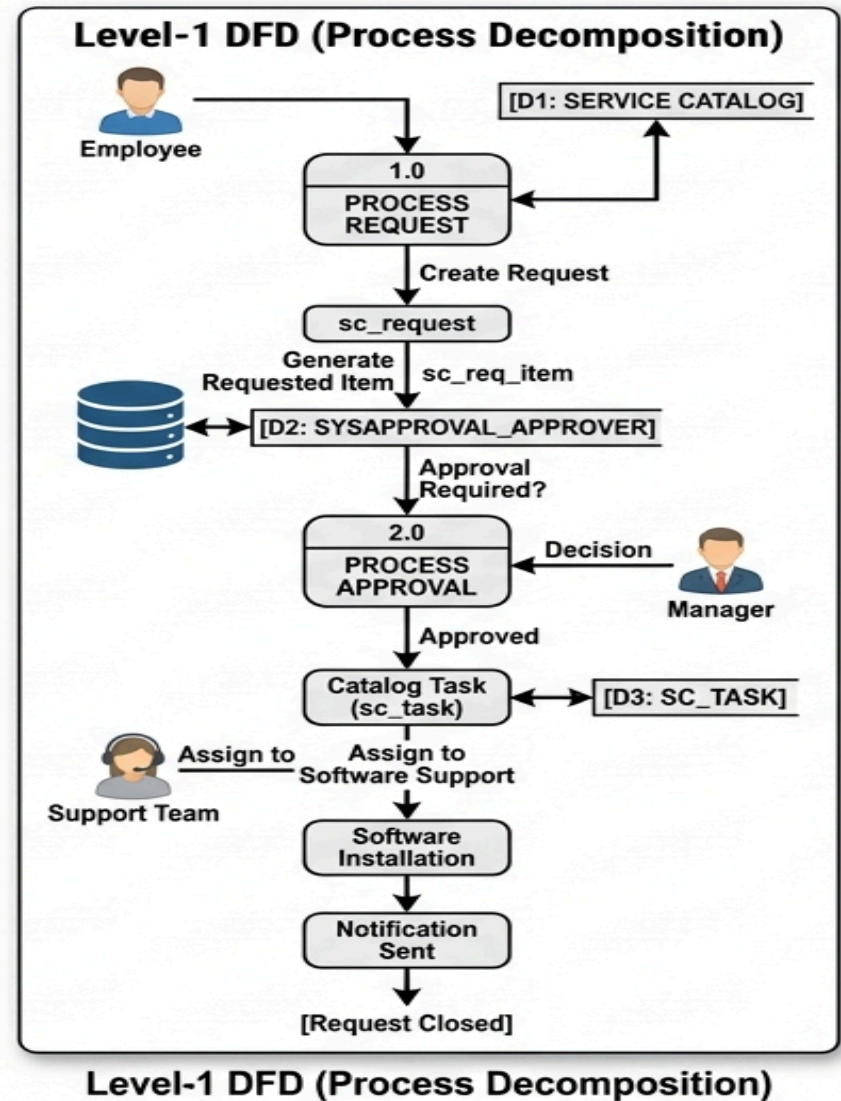

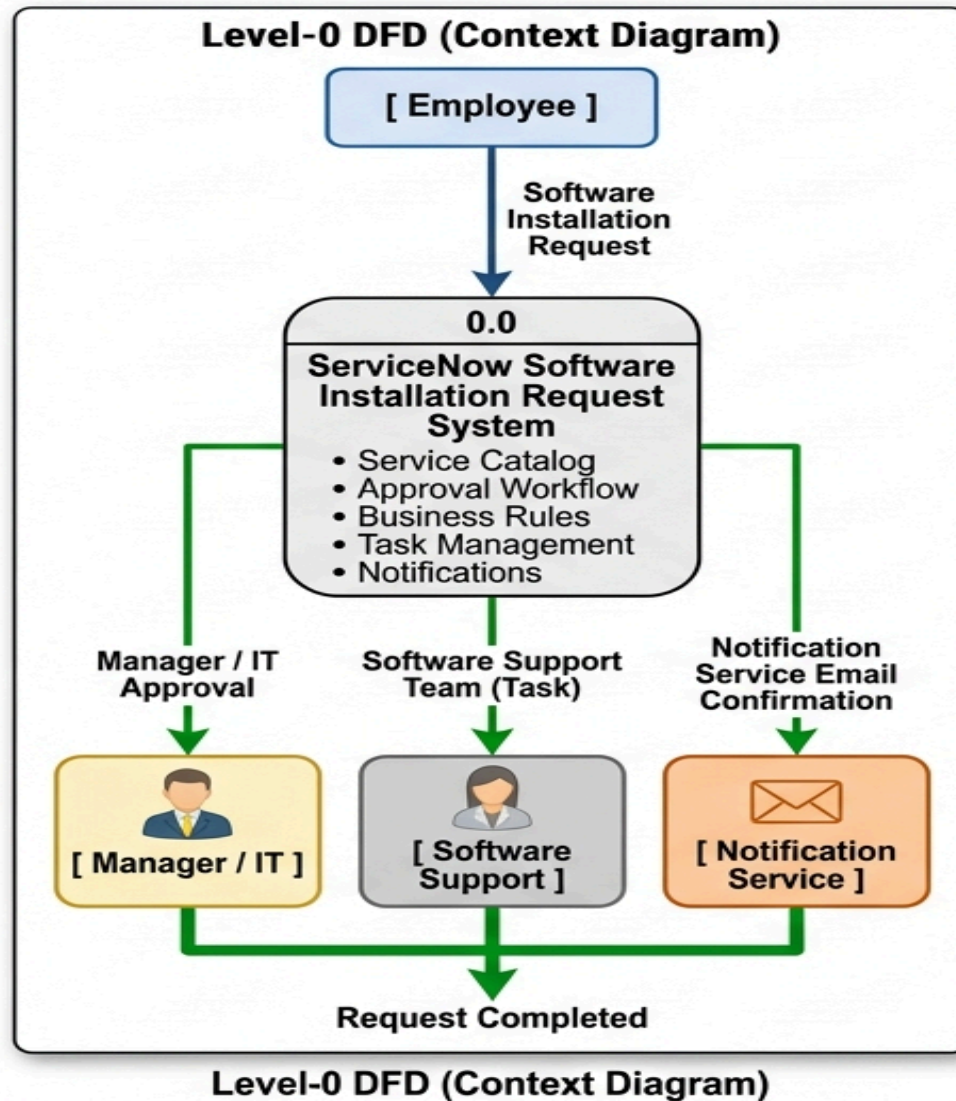

While your text-based flows capture the functional lifecycle, technical DFDs require specific notations to differentiate between **External Entities** (squares), **Processes** (circles/rounded rectangles), and **Data Stores** (open rectangles).

Level-0 DFD (Context Diagram)

The Context Diagram defines the system boundary. It should show the central system interacting *only* with external entities (actors or outside systems).

Level-1 DFD (Process Decomposition)

A true Level-1 DFD highlights how data moves through internal processes and hits physical database tables (Data Stores).

User Stories

User Story Number	User Type	Functional Requirement (Epic)	User Story / Task	Acceptance criteria	Priority	Release
USN-1	Employee	Software Request	As an employee,I can request licensed software through the Service Catalog.	Request is successfully submitted into the ServiceNow platform tracking queue.	High	Sprint-1
USN-2	Employee	Request Details	As an employee,I can provide software name, business justification, installation type, and device details.	All fields labeled mandatory must capture valid text or structured variables correctly before checkout.	High	Sprint-1
USN-3	Employee	Notifications	As an employee, I receive a confirmation after submitting the request.	Automated platform confirmation notification is generated and received via email template.	High	Sprint-1
USN-4	Manager	Approval	As a manager, I can approve or reject software installation requests.	Approval decision is cleanly recorded inside the sysapproval_approver engine log.	High	Sprint-1
USN-5	IT Administrator	Task Management	As an IT administrator, I receive a task after approval to install the requested software.	Fulfillment catalog task (sc_task) is automatically generated and routed to assignment group.	High	Sprint-1
USN-6	IT	License	As an IT administrator,I can place requests on	Task state maps to 'On	Medium	Sprint-2

	Administrator	Management	hold when software licenses are unavailable.	Hold' and an internal cross- referenced workflow event logs automatically.		
USN-7	Employee	Request Tracking	As an employee, I can monitor the status of my software installation request.	Status state indicators are transparently visible throughout the complete transaction lifecycle.	High	Sprint-2
