

Project Design Phase: Proposed Solution Template

Date	24 June 2026
Project Name	Licensed Software Installation Requests via ServiceNow
Maximum Marks	2 Marks

Proposed Solution Details

S.No.	Parameter	Description
1	Problem Statement	Legacy manual processes for software requests cause excessive email back-and-forth, lack of visibility, and delayed provisioning, leading to operational friction.
2	Idea / Solution	A centralized ServiceNow Service Catalog application that automates the request, validation, and fulfillment workflow for licensed software assets.
3	Novelty / Uniqueness	Implements dynamic reference lookups and automated "validation gates" that eliminate manual typos and streamline task dispatching without human triage.
4	Social Impact / Satisfaction	Enhances employee productivity by reducing waiting times and provides a transparent, self-service experience that boosts organizational trust.

5	Business Model	Operational cost reduction through automation (Efficiency Gains) and improved compliance tracking, reducing potential audit risks and wasted license costs.
6	Scalability	Designed as a modular, 3-tier micro-services architecture that allows for the addition of new catalog items and workflows as organizational demands grow.
