

Project Development Phase: Performance Testing

Date	26 June 2026
Project Name	Licensed Software Installation Requests via ServiceNow
Maximum Marks	4 Marks

1. Performance Testing Objectives

The objective istoensurethatthe ServiceNow workflow—specifically the request submission and approval routing—maintains stability and responsiveness under concurrent user loads.

- **Load Testing:** To verify that the application handles the expected number of concurrent software requests without latency.
- **Stress Testing:** To determine the breaking point of the "Request Submission" form when subjected to extreme traffic volumes.
- **Scalability Testing:** To ensure the integration hub maintains performance as more software items are added to the catalog.

2. Performance Metrics & Thresholds

Test Type	Metric	Target Threshold
Response Time	Time to load Service Portal	< 2.0 seconds
Throughput	Requests processed per minute	50+ requests/min
Error Rate	Failed request submissions	< 0.1%
Concurrency	Max concurrent users supported	200+ users

3. Performance Testing Methodology

1. **Test Environment Setup:** Use a sub-production (Dev/Test) instance of ServiceNow to replicate production configuration.
2. **Script Development:** Use the *ServiceNow Automated Test Framework (ATF)* to record user journeys (e.g., "Submit Software Request").
3. **Execution:** Apply incremental loads using a virtual user generator to observe system behavior.
4. **Monitoring:** Utilize the **ServiceNow Node Log** and **Transaction Log** to monitor CPU usage and database response times during the test.
5. **Analysis:** Identify bottlenecks in the "Approval Workflow" scripts and optimize them to reduce execution time.
