

Project Development Phase: User Acceptance Testing (UAT)

Date	26 June 2026
Project Name	Licensed Software Installation Requests via ServiceNow
Maximum Marks	4 Marks

1. UAT Objectives

The primary goal of UAT is to validate that the ServiceNow software request solution functions as intended in real-world scenarios and meets the business expectations defined in the planning phase.

- **Requirement Verification:** Confirm that all user stories (USN-1 to USN-5) are fully functional.
- **User Experience (UX):** Ensure the Service Portal is intuitive for non-technical employees.
- **Process Compliance:** Verify that the approval workflow correctly routes requests to the right managers.

2. UAT Test Case Matrix

Test Case ID	Scenario	Expected Result	Status
TC-01	Employee submits request	Request appears in the queue with "Pending" status	Pass
TC-02	Manager receives email	Manager receives notification with "Approve/Reject" links	Pass
TC-03	Manager approves request	Workflow triggers the "Assignment to IT" process	Pass

TC-04	User checks status	Status bar accurately reflects the current request stage	Pass
-------	--------------------	--	------

3. UAT Methodology

1. **Selection of Testers:** Assign a group of "Power Users" (employees) and Departmental Managers to participate in the testing.
2. **Environment Preparation:** Deploy the build to the UAT Instance. Ensure all test data (user profiles, software lists) is ready.
3. **Execution & Feedback:** Testers perform the scenarios above and record any bugs or usability improvements using a centralized tracker.
4. **Sign-off:** Once all critical issues are resolved, the stakeholders sign off on the solution, confirming it is ready for production.
